Backend developer specializing in JavaScript and Node.js, with experience building scalable APIs, database-driven applications, and maintainable server-side systems.

EDUCATION

Mechi Multiple Campus

Bachelor of Science in CS & Information Technology

Bhadrapur, Jhapa

Oct. 2023 – current

EXPERIENCE

Backend Developer

Jan. 2024 – Dec 2025

Jynx Agency

- Developed and maintained responsive e-commerce websites and CRM applications, implementing new features and ensuring high performance across devices.
- Built and integrated RESTful APIs, optimized database queries, and collaborated with cross-functional teams to deliver scalable, production-ready solutions.
- Improved application performance, security, SEO, and user experience through code optimization, bug fixes, and adherence to industry best practices.

Backend Developer

June. 2026 – Current

Kachhuwa Technologies

- Designed and developed scalable backend services and RESTful APIs for business CRM applications, implementing core business logic and database architecture.
- Built secure authentication, role-based access control, and workflow automation features while integrating third-party services to meet project requirements.
- Collaborated with cross-functional teams to deliver production-ready backend solutions, optimizing performance, reliability, and maintainability across multiple client projects.

PROJECTS

Multi-Vendor E-Commerce Platform

- A fully functional backend API designed for e-commerce platform.
- A multi-vendor e-commerce for a client

Do - command-line tool to optimize file operations

- A versatile command-line tool designed to optimize file operations and CPU-intensive tasks.
- Implemented advanced features like hashing & verification, encryption/decryption, and data conversion (e.g., CSV to JSON).

CLI based File Sharing Tool

- Built a file-sharing web application that supports uploading, downloading, and sharing files (documents, images, videos, PDFs).
- Designed and implemented access control and shareable links for secure file sharing.

Squirrel Web Framework

- Developed a minimalist web framework in Go for building lightweight backend services.
- Implemented routing, middleware handling, and HTTP server abstractions to simplify API development.

SKILLS

Backend Development, Node.js, NestJS, Express.js, Golang, PostgreSQL, MongoDB, Prisma, REST APIs & gRPC, Git & GitHub, Docker, Linux, System Design, Problem Solving & Debugging
